AYUSH KULAL

Full Stack Developer (Java)

Pune, India | ayushkulal20@gmail.com | +91 7620726891 | github.com/wolfnhk20/ | ayushkulal.vercel.app

SUMMARY

Full stack developer with a **backend focus**, building REST APIs and role-based systems using Spring Boot, JPA, and PostgreSQL. Experienced in JWT authentication, OAuth 2.0 integration, and end-to-end feature delivery from schema design to frontend. Familiar with containerizing applications with Docker and deploying on Vercel, Railway and Render.

PROJECTS

FinDash - Role-Based Finance Dashboard | Live | Github *Typescript · Spring Boot · Supabase · Spring Security · JWT*

Full-stack finance dashboard with role-based data access for Admin, Analyst, and Viewer

- Secured REST endpoints using Spring Security; role filters ensure each user type accesses only permitted data
- Built transaction APIs with server-side filtering and sorting, scoped to the authenticated user's records
- Used Axios interceptors to attach JWT on every outgoing request and auto-redirect on 401 responses
- Reduced frontend load time by 40% parallelizing independent API on initial dashboard render
- Containerized the Spring Boot backend with Docker for consistent local and deployment environments

Bloom Events - Event Coordination Platform| Live | Github *Spring Boot · React · PostgreSQL · Supabase · OAuth 2.0 · JWT*

Multi-step event booking platform with Google OAuth login and dynamic cost calculation

- Integrated Google OAuth via Supabase; issued app-level JWTs post-authentication for API authorization
- Designed REST APIs for event, package, and service management using JPA with normalized relational tables
- Implemented server-side dynamic cost recalculation triggered on each booking step update
- Managed multi-step form state in React with per-step validation before allowing progression
- Deployed frontend on Vercel and backend on Railway with environment-based config separation

EcoWatchAI - Wildlife Detection System | Live | Github *Python · YOLOv8 · Flask · TensorFlow Lite*

Real-time wildlife species detection system using object detection on field images

- Implemented YOLOv8 for object detection; fine-tuned on a labeled wildlife dataset of ~4,000 images
- Converted trained model to TensorFlow Lite format for faster inference and reduced memory footprint
- Built UI for image upload displaying bounding boxes, species label, and confidence score per detection
- Received a Letter of Recommendation from Pune Municipal Corporation for the project

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, SQL
Backend: Spring Boot, Spring Security, REST API Design, JPA, Hibernate, Maven
Frontend: React, Tailwind CSS, Axios, HTML, CSS, Typescript
Database: PostgreSQL, MySQL, MongoDB
Auth: JWT, OAuth 2.0 (Google / Supabase)
DevOps & Tools: Docker, Git, GitHub, Vercel, Railway, Postman
AI / ML: YOLOv8, TensorFlow Lite, Image Processing

EXPERIENCE

Java Developer Intern – Codec Technologies *Dec 2025 – Jan 2026*

- Engineered scalable REST APIs using Spring Boot with robust validation and optimized database interactions
- Delivered high-performance backend integrations with PostgreSQL, improving response efficiency and system reliability

Software Development Intern - IANT, Pune *Jun 2023 – Jul 2023*

- Built backend modules in Java and Python handling form submissions and database operations
- Implemented CRUD workflows using JDBC and SQL; worked on input validation and local DB optimization

EDUCATION

B.E. Computer Engineering - AISSMS College of Engineering, Pune *2024 – 2027 | CGPA: 8.9*

Diploma in Information Technology - AISSMS Polytechnic, Pune *2021 – 2024 | 88.88%*

ACHIEVEMENTS

- Ranked 1st among 240 participants at State Level TechCode War 2023
- Ranked 2nd at Techno-Innova 2024 – C Challenge (BVJNOIT Polytechnic)
